First round section line

Dual layer professional line. This is a professional line that combines two different materials: the core material offers excellent breaking strength while the surface layer is made of material assures high resistance to wear. The two materials are coextruded and the resulting line is more durable than conventional lines.

■ Brushcutter accessories

Greenline type

High quality bright green (exclusive Emak colour) line supplied with 4 different profiles: round, four-lobed, five-lobed, and silent. Made of a high-tech polyamide monofilament with a high percentage of Nylon PA 6/6, blended with special components to impart high exterior wear resistance and interior breaking strength. Special plasticizers impart properties of softness to ensure high flexibility. Finally, an oil-based surface treatment reduces problems of sticking and welding between adjacent windings of line during intensive use in critical conditions and when subject to vibration. The "Silentline" version features a special profile to achieve a significant reduction in noise levels.
